About Me

With a strong background in mining and mineral processing engineering, I transitioned into software development due to the lack of evolving opportunities within the mining industry. This shift ignited a passion for the ever-evolving world of technology and its potential to reshape industries.

Now, with a focus in software development, I'm leveraging my problem-solving skills honed in engineering to tackle new challenges and create innovative solutions. As a lifelong learner, I'm constantly seeking to expand my knowledge in areas like web development and mobile application development. I'm committed to staying current with the latest technologies and trends, driven by a desire to make a positive impact.

Experiences

 FREELANCE

Fullstack Software Developer

Nov 2022 - Present • 1yr 8mos

Freelance at Home

In addition to my client projects, I've been actively honing my skills by building web applications using VueJS, Laravel, and PHP. This allows me to stay current with the latest technologies and expand my full-stack development capabilities.

Here are some examples of my freelance work:

- Created a portfolio website showcasing my projects, utilizing HTML, CSS, JavaScript and NextJS to design an aesthetically pleasing and informative interface.

- Implemented several responsive and modern UI using TailwindCSS for a mobile-first web application, optimizing user experience across various devices and screen sizes.

- Created a ReactJS project where I built a responsive and interactive dashboard for visualizing real-time data using API integration and charting libraries.

- Built a full-stack web application using Ruby on Rails, incorporating user authentication, database management, and RESTful API endpoints for seamless data retrieval.

- Utilized JavaScript and the ReactJS library to create several dynamic and engaging frontend projects.

Junior Software Developer at Dafric Logistics LTD

Jul 2023 - Jan 2024 • 6mos

Dafric Logistics LTD

For 6 months, I thrived in a remote software development internship at a logistics company. I wore many hats, working on both the front-end and back-end to ensure the smooth operation of their integrated management system (IMS). This internship was an amazing learning experience, especially because I went in with no prior knowledge of Laravel, Vue.js, or GraphQL.

However, I'm a fast learner, and I was able to quickly pick up these new skills and contribute meaningfully to the team. My responsibilities included:

- Building features across the tech stack: I developed functionalities for both the user interface (using Vue.js) and the server-side logic (using Laravel and PHP).

- Ensuring system integrity: I played a crucial role in maintaining the IMS by debugging issues, fixing bugs, and optimizing code for performance.

- Collaboration in a remote setting: Despite the remote nature of the internship, I effectively communicated with senior developers, participated in code reviews, and learned valuable teamwork practices.

This internship not only equipped me with valuable technical skills, but it also highlighted my ability to learn quickly, adapt to new technologies, and contribute effectively in a fast-paced environment.
